

Here is a step-by-step guide to making your Dashen Bank dashboard start automatically and run full-screen (kiosk mode) on a Windows PC or laptop. This involves three main parts: **auto-login**, **disable sleep**, and **launch Chrome in kiosk mode**.

Step 1: Enable Auto-Login to Windows

This ensures the computer boots straight to the desktop without waiting for a password.

1. Press **Windows + R**, type `netplwiz`, and press **Enter** .
2. Select your user account, then **uncheck** the box that says "**Users must enter a user name and password to use this computer**" .
3. Click **Apply**. A box will pop up asking for your password. Enter your Windows password twice and click **OK** .
4. Click **OK** again to close the window.

Note: If you use a PIN, you may need to remove it first in Settings > Accounts > Sign-in options .

Step 2: Prevent the Screen from Sleeping

The dashboard needs the screen to stay on 24/7. You can change this in Windows Settings.

1. Open **Settings > System > Power & sleep** .
2. Under **Screen** and **Sleep**, change both settings to **Never** (for both "On battery" and "Plugged in") .

*If your organization blocks these settings, you can use a free lightweight tool like **NoSleep** that prevents the screen from locking or sleeping without needing admin rights .*

Step 3: Create the Kiosk Shortcut

This is the command that opens Chrome in full-screen mode, hiding all browser buttons.

1. **Find Chrome's location:** Right-click the Chrome shortcut on your desktop (or in the Start menu), select **Open file location** (you may need to do this twice to find the actual application file) .

2. The path usually looks like: `C:\Program Files\Google\Chrome\Application\chrome.exe` .
3. **Right-click on an empty spot** on your desktop, select **New > Shortcut**.
4. In the location box, enter the following (replace the path if yours is different). **Make sure to include the quotes**:

text

```
"C:\Program Files\Google\Chrome\Application\chrome.exe" --kiosk http://localhost:3000/?branch=JIM001
```

Use your server's IP (e.g., 192.168.1.100:3000) instead of localhost if the backend runs on a different machine .

5. Click **Next**, name it something like "**Dashen TV Dashboard**", and click **Finish**.

Step 4: Make It Start Automatically

Now, place that shortcut in the Startup folder so it runs every time Windows starts.

1. Press **Windows + R**, type `shell:startup`, and press **Enter** .
2. This opens the Startup folder.
3. **Copy** the shortcut you just created in Step 3 and **paste** it into this folder

Final Test

Restart the computer. It should log in automatically, skip the desktop, and open your dashboard in full-screen kiosk mode.

One important note: Kiosk mode locks the browser, but it doesn't lock the operating system. Users can still press `Alt + F4` or the Windows key to escape. If you need a fully locked-down device, you would need to look into Windows "Assigned Access" settings or use a third-party kiosk application. For a branch TV dashboard, the standard `--kiosk` flag is usually sufficient.
